coin name is Authenti coin,,, atc is the symbol (bsc)

total supply :10000000000000

18 decimals
Smart tokenomics

with in 90 days original deposit coins will have 15% transaction fee for trading outside network 10% goes to holders , 5% goes to LP

in the network 1.5% fee 1% back to holders .5% goes too LP

when joining in the network fee of 7% join in network 2% goes too holders , 2% LP, 3% goes to promotion and advancement of the coin

original investment can be taken out any time at the 15% which 10% goes to holders , 5% goes to LP within 90days ,

but any thing higher then original investment with in 30days is at 65% fee 50% goes too holders 15% goes to LP

at 31-60day mark goes down too 45% fee holders would get 35% and the 10% goes to LP

day 61 - 90 final stage it is at a 25% fee 20% goes to holders , 5% goes to LP

after 90days the regular 7% transaction fee too outside network 2% goes to holders , 2% goes to LP ,3% goes to promotion and advancement of the coin

this will incentivize holders and rewards them it also takes away constraints of sending coins between each other as there is 1.5% fee.

if original fund already passed 90days then the transferred funds receiver doesn't have to wait 90days, if it is under 90days

then receiver has too wait 90days or get hit with the 90day fees explained earlier they would get hit with the 1.5% fee when internal transfer with in the coin network

staking an option if staking 51%+ of coins for 3 mo then rest of coin can be transferred at 13% transaction fee 10% goes to holders ,3% to LP

also want too have 1quadrillion coin but i want to burn 340t coins

and have a burn rate every 3 months to bring the coin total supply down 2t per quarter and doubles every 2years until it reaches total of 250b coins

LP is locked 3yrs
